

## Create the Flask Application

Date	17 November 2022
Team ID	PNT2022TMID38912
Project Name	Smart Fashion Recommender Application

### Flask code and running :

The screenshot shows the Visual Studio Code editor with a Python file named `app.py` open. The code defines a Flask application with a single route `/` that returns `<p>Hello, World!</p>`. The terminal at the bottom shows the command `python app.py` being executed, and the output indicates that the Flask app is running on `http://127.0.0.1:5000`. A warning message is also displayed: `WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.`

```
1 from flask import Flask
2
3 app = Flask(__name__)
4
5 @app.route("/")
6 def hello_world():
7     return "<p>Hello, World!</p>"
8
9
10 if __name__ == "__main__":
11     app.run()
```

Terminal Output:

```
VK-PC@lenovo MINGW64 ~/Desktop/documents
$ python app.py

VX-PC@lenovo MINGW64 ~/Desktop/documents
$ python app.py
* Serving flask app 'app'
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
```

### Output
